

LONG-RANGE PLANNING

It shall be the responsibility of the Board and Superintendent to develop and/or implement plans for the District that will meet the present and future educational requirements of the community. To effectively discharge this responsibility, the Board shall develop a long-range building plan to be implemented over the next several years to meet the School District's school facility-related requirements.

The Board should actively involve employees, students, parents, and local citizen groups, specially designated committees, technical personnel (e.g., architects, planners, and approved outside consultants) in the design, development, and or revision of the long-range planning program.

The Superintendent shall be authorized to secure the services of experts in the area of school plant planning to work with professional personnel during educational specification preparation if he considers such assistance beneficial.
